## **Meta Cadastral System Manual**

### **Introduction**

**Choose your own citizen for entering the demo (25 families)**

**List of subservices in the demo and the full version**

### **Introduction**

Meta Cadastral System (MCS) is a big data, created to help the economical-administrative management of countries. The MCS is an innovative model for integration and modernization of information in the e-governments with the purpose of solving major problems; a new economical-administrative system offered for growth, better management of resources and finally, poverty alleviation. At the moment, in every country, elements of this system are working separately, but there are many benefits for integration of them under this model. In this model, integration of information means sharing data of all legal & natural people based on this model. From the MCS point of view, every property, whether its real estate, movable property or a bank account has a definite id which has a definite economical value, owner and place.

By creating the MCS everything will be put in the right place. We believe that in the economic management of the countries, their positioning of the data has not reached its full potential, by adding positioning id to all the properties

we can integrate them under one online domain and also create surplus value and abilities for them. MCS benefits from the value added by integration and commanding them would even add more value to them.

In this demo, some of the services have been simplified. The purpose of this demo is to create a basic understanding and to attract investments for the full version.

MCS will create a similar economical-administrative structure for countries. countries will be integrated under the same information structure for achieving more benefits and avoiding the waste of resources.

The MCS just like the Cadastral System, is a system created for the global scale and its foundation is similarly designed in all countries. This system is also flexible toward different laws in different countries. For example, if in some countries, both men and women pay child support, that would not cause a problem in the system.

In addition to economic issues in the MCS, the system also pays attention to administrative issues. There are ten services in the system, each one regarding a specific economical or administrative issue. There are multiple subservices in each service. Each Legal or Natural id has its own account and can use the subservices in the system. The Legal Person's subservices are different in certain situations with the Natural person's. For example, since a Legal person doesn't have Basic needs (subsistence needs), the subservices would be meaningless to them.

The Meta Cadastral System is based on the Cadastral System. Cadastre is a universal model used for real estate registration. In MCS every real estate has an information table linked to the real estate id. Information table has four sections. First part is the real estate, the second part is related to the movable properties, third part is related to bank account of the tenant or the person who is active in the property and the fourth part belongs to the bank account of employees or people employed in the property. The property's information will be registered in every row. In the property's row, the owner's id and its value is added to the property's id. The property can be real estate or movable property or a bank account. Everything that has economical value but isn't a real estate or a bank account is a movable property and has an id. You can register every type of property such as real estate, movable properties, bank transactions and everything that has economical value. The system would filter the rows of real estate information

table and will display the subservices based on the user's id and its service of choice. By creating the MCS, every relocation and transfer of property would be done under this system. Every relocation and transfer of property will be registered and would receive an international MCS id. If you have any questions you can refer to FAQ in the demo.

### **The benefits and the effects of the Meta Cadastral System**

Every ideal required for an economical-administrative system can become true by creating MCS; justice, security, basic needs, integration, peace, cooperation, transparency, purity, order... The MCS would prevent the waste of resources both national (bad management) and international conflicts (wars). With the help of the MCS, we can reduce bureaucracy and distribute resources fairly. The government agencies can use this data center as a source of property and personal information. Creating this system will significantly reduce economical corruption and also creates a single domain for economical and administrative transactions (this does not mean elimination of domains such as stock exchange, judicial organizations, revenue services, etc.).

This system determines the reason for every bank transaction before conducting it. By analyzing the transaction id which are now equipped with new information, we use them for smart calculation of a factory's output or taxes.

The value of every person's properties is displayed in the MCS at any given moment. Basic needs assistance are offered to people with low balance and can be done as a combination of gift or a loan to reduce concealment of properties. Receiving smart subsidies does not require a deposit from a person or property, nor does it carry a punishment, but if the indebted person finds access to the wealth, his debts would atomically be cleared.

The place and type of assistance would be managed online and by an AI. Since the real estate are adjusted based on the activity inside them and how effective they are in basic needs assistance, they get a basic needs code. For example, the subsidies allocated for food, can only be used in food related locations.

MCS will offer all the government's policies regarding property management, poverty alleviation, taxing and etc., integrated under one domain. By creating this economical structure, the population will not hoard wealth due to fears for the lack of basic needs since the MCS will alleviate poverty on a systematic level.

### **Necessary Infrastructure for Meta Cadastral System**

The MCS needs the real estate and the owner's id. In every real estate, the owner can register his own or his tenant's id as the activity space owner. The rest of the information (bank account of activity space owner, employee's bank account, movable property) on the property's information table can be entered by the activity space owner. So you can say the necessary infrastructure needed for the MCS is the Cadastral system. The Cadastral id and Geographical Real Estate id are both international identification systems and can be converted.

### **Working with the MCS demo**

The demo version is based on a fictional country with a limited number of citizens. A small simplified model which displays the framework and its main abilities. We've tried to cover most of the information and its variety of services to help better understand the system. In the demo version, all the data are hypothetical and but use the same laws as the real world. You can test the system's abilities and subservices by using the hypothetical data. You can choose one of the following 25 families provided to you by the manual. The user can enter the system with their desired id number. Please inform us via the "contact us" part of the site which person would you like to play as. In this fictional country there are 20 legal ids (id 001-020) and 80 natural ids (021-100). 20 of 80 citizens get a legal id password in addition to their personal id. If your desired citizen has a child, you can get a password for their child too. After gathering participants, you will get the password of your desired citizen and then you can enter the system. If you have enjoyed working with the MCS demo, we can set up a meeting to have more conversations.

Thank you for your cooperation bringing this system to reality.

**Note:** Please use a computer instead of your phone for easier access. When you select a subservice, you will see two tables in each page with 22 columns in each table. The title of columns might be too small for smartphone view, so it's better to use a computer for the website.

# List of subservices in the demo and the full version

Before reading the subservices, pay attention to these 4 points:

- 1) In the demo, the subservices will be shown as sentences. But in the full version, to make the process faster and easier, the subservices can be designed differently. For example, most of subservices on service 1 ( I want to see my property’s information on the country’s real estate map) can be shown like this

Or summarize most of subservices on service 2 ( I want to change my property’s information)

Or subservices of service 3 (I want to see the status of my basic needs in this month and conduct transactions for my basic needs) can be shown as a bar chart to the user

- 2) In MCS all properties are divided between residential and non-residential. So by non residential, we mean a property that does not have a residential purpose. Such as markets, banks, parks etc.
- 3) Most of the subservices can be used by both natural and legal users. But some sub services are exclusive for natural and some are exclusive for legal users. In the full version, the user will see the sub services specific to their type of account, but in the demo, the user sees all of the subservience. However, if they choose a non related subservice, it would not show anything.
- 4) The subservices are shown with 3 colors, this is what they mean.

Black: Demo and full version

Orange: Demo only

Gray: Full version only

## Service 1: I want to see my property's information on the country's real estate map

As a Natural Person, I want to see my living space (as you can see from the beginning of the setencce, the results of the subservice will only be shown for users with Natural id)

As a Natural Person, I want to see my work space.

I want to see my activity space (as you can see from the beginning of the setencce, the results of the subservice will be shown for all users regardless of their Id type)

As a Natural Person, I want to see my real estate, movable properties and know their collective value (non-corporate properties)

As a Natural Person, I want to see my bank account's balance (non-corporate properties)

As a natural person, I want to know the amount of debt exclusions of my related city and my excluded real estate and movable properties.

As a natural person, I want to see the legal and natural id of people I owe/lend balance to and see the combined balance of my bank accounts excluding the debt.

As a Natural Person, I want to see my net worth (non-corporate properties) (Balance number used for smart subsidies)

As a Natural Person, I want to see my real estate and movable properties in corporations and know their collective value, knowing I don't have the right to sell or change these properties.

As a Natural Person, I want to see my corporate account's balance based on my shares.

As a Natural Person, I want to see my Collective balance in companies owned properties (Corporate balance only)

As a Legal Person, I want to see my real estate, movable properties and know their collective value.

As a Legal Person, I want to see my bank account's balance.

As a legal person, I want to see the legal and natural id of people I owe/lend balance to and see the combined balance of my bank accounts excluding the debt.

As a Legal person, I want to see my net worth.

As a legal Person, I want to see my real estate and movable properties in corporations and know their collective value, knowing I don't have the right to sell or change these properties.

As a legal Person, I want to see my corporate account's balance based on my shares.

As a legal Person, I want to see my Collective balance in companies owned properties(Legal person's balance number is in form of corporate stock )

I want to see the line graph of my property's combined value (non corporate stock)

I want to see the line graph of my property's combined value (corporate stock)

## Service 2- I want to change my property's information
